LOS OLIVOS COMMUNITY SERVICES DISTRICT GROUNDWATER MONITORING WELL CONSTRUCTION NOTICE

Hello Neighbor,

I stopped by to let you know that between November 14-22, we are planning to drill a groundwater monitoring wells near your home or business. You can see the approximate locations in the image below. The actual drilling is only expected to take a couple of days, the rest of the time will be needed to take the first water samples and properly close and protect the wellheads. My apologies in advance for any inconveniences caused by the activities.

These initial two wells are part of a larger plan to better understand the impacts our septic tanks are having on the shallow aquifer groundwater. A copy of the full groundwater monitoring plan can be found at: <https://www.losolivoscsd.com/files/61f8f5301/Groundwater+Monitoring+Plan+GSI+3.22.2021.pdf>

Why are we doing this? Groundwater is among our community's most precious natural resources. Regular and consistent measurements of water levels and contaminants in our groundwater provide the most fundamental indicator of the status of this resource and are critical to meaningful evaluations of the quantity and quality of groundwater.

Please take extra care as you navigate around our construction crew and drilling rig. Should you have any questions, please do not hesitate to contact me directly.

Sincerely,

Guy W. Savage
General Manager
