Hi Guy,

Not sure if the unimproved alley may be part of a Los Olivos wastewater solution, but please see the email chain below FYI with Joan. I was inquiring as the trees in that alley came down last week so I figured they were getting close to doing something. Years ago there was talk of using that unimproved alley as a potential place for shallow drywall's, etc...for shallow aquifer ground water recharge as its up gradient from most of towns septic tanks and close to the site near the church that was originally studied for the MBR. The idea was to have a permeable but drive-able pavers or nice gravel finish.

I hope flood control was asked about paving that alley as it seems to have a proclivity for flooding already. I am not expert but it flooded out our old side street cafe building in 2017.

Mark

Mark,

Really interesting idea. I do know flooding continues to be a concern in that area. It is NOT part of the County maintained road system and so it will NOT be brought up to County standards at this time. It is sort of a stop gap measure. I am planning to ask that it be placed into our maintained system and that it should be and just historical accident that it was not. That means getting it onto our Capital improvement program list. So this is longer term plan. If Guy has something more specific, I am certainly eager to hear more. And perhaps if it does come forward later, the asphalt could be taken up.

Joan
